PROFESSIONAL SUMMARY

Computer Science graduate (BSc Hons) and full-stack engineer with commercial experience building, deploying, and operating production web applications end-to-end. Works across TypeScript and Python backends, React and Next.js frontends, PostgreSQL data layers, and AWS infrastructure provisioned with Terraform — through containerization, CI/CD, and observability. Additional systems administration and automation background from military service maintaining high-availability infrastructure.

EXPERIENCE

Junior Full-Stack Developer — PylarinosTech E.E.

Sep 2025 – Jun 2026

Athens, Greece — Web application development company. Contributed across backend, frontend, and cloud infrastructure on two production platforms.

Cloud-Native Learning Platform — FastAPI, Python, PostgreSQL, React, Docker, Terraform, AWS

- Developed an async REST API with JWT authentication, bcrypt hashing, role-based access control, and Pydantic validation, paired with a React SPA handling protected routes and full token lifecycle management.
- Provisioned the AWS stack as code with Terraform — VPC, ECS Fargate, ALB, RDS, ECR, IAM — with multi-AZ redundancy and autoscaling.
- Automated CI/CD for testing, multi-stage image builds, and ECS deployments, with CloudWatch logging, health checks, and an Nginx reverse proxy.

Multi-Tenant Workflow Automation SaaS — Next.js 14, TypeScript, tRPC, Prisma, Redis, Inngest, Stripe, Kubernetes

- Implemented multi-tenant architecture with organization isolation, four-role RBAC, credential encryption at rest (libsodium), and sliding-window rate limiting.
- Built an event-driven async execution engine with retry logic, token and cost tracking, and end-to-end run traceability through OpenTelemetry and Sentry.
- Developed a drag-and-drop visual flow builder supporting 100+ integrations, alongside a reusable TypeScript Connector SDK with strict runtime validation.
- Integrated CodeQL, Trivy, and gitleaks security scanning, k6 load testing, and Stripe metered billing across three subscription tiers into the CI/CD pipeline.

Junior Systems & Automation Engineer (Military Service) — Hellenic Army

Sep 2024 – Jul 2025

Samos, Greece — Managed mission-critical IT infrastructure and modernized workflows through automation.

- Maintained high-availability server environments and implemented system monitoring, proactively resolving bottlenecks to ensure zero downtime.
- Engineered custom Python and Bash automation scripts that significantly reduced manual overhead and accelerated routine administrative tasks.
- Orchestrated end-to-end hardware deployment, network configuration, and technical maintenance of internal web applications.

PROJECTS

Java Recruiting Platform — Full-Stack Job Board

Personal Project

Java 8, Servlets, JSP, JDBC, MySQL, Bootstrap, Apache Tomcat

- Three-role platform (Candidate / Recruiter / Admin) with role-based dashboards, full job lifecycle management, and HikariCP connection pooling.
- SHA-256 hashing, CSRF protection, and server-side input sanitization, with a responsive bilingual EN / EL interface.

VR Data Visualization Platform — BSc Thesis

2024

Unreal Engine 5.3, C++, OpenXR

- Immersive VR platform for interactive exploration of large datasets — full interaction system (grab, teleportation, haptics), multi-headset support, and rendering optimized with Nanite, Lumen, and hardware ray tracing.

TECHNICAL SKILLS

Languages: TypeScript / JavaScript, Python, Java, SQL, Bash

Cloud & DevOps: AWS (ECS Fargate, RDS, ALB, ECR, VPC, IAM, CloudWatch), Docker, Kubernetes, Terraform, GitHub Actions, Nginx, Linux, Microservices

Backend: Node.js, Next.js 14, FastAPI, tRPC, Express, Prisma, SQLAlchemy 2.0 (async), REST APIs, OpenAPI, Event-Driven Architecture, JWT / OAuth2, RBAC

Frontend & Data: React 18, Tailwind CSS, Radix UI, Bootstrap 5 · PostgreSQL, MySQL, Redis, SQLite

Quality & Security: OpenTelemetry, Sentry, Vitest, Playwright, k6, CodeQL, Trivy, gitleaks

Practices: Git, Agile / Scrum, TDD, Code Review, Monorepos (Turborepo, pnpm)

EDUCATION & CERTIFICATIONS

BSc (Hons) Computer Science — University of East London

2024

Metropolitan College, Greece — Thesis: VR Data Visualization Platform (see Projects).

AWS SimuLearn: Cloud Practitioner — AWS Training & Certification

Mar 2026

Languages: Greek — Native · English — Fluent (professional working proficiency)
